

Powered Ascender ACE24

Product Description

ACE24 is a beautifully engineered battery operated powered ascender from the team at ASAT (the maker of the RD2 Rescue Descender). It was developed as a cost effective device for where battery capacity is important but an affordable price point. ACE24 is a heavy duty 'rescue / rigging' device with an expected battery life of 700m @ 140kg general use. And the big benefit with the ACE24 is that it is bi-directional so it doesn't matter which way you fit the rope making it safe and easy to use.

ACE24

Rope 11mm 1891-A Rope
Rated Load 180kg
Max. Rated Load 260kg
Max. Speed 30m/min
Device Weight 18kg (Inc. Battery)
Kit Weight 27kg
Device Dimensions 30 x 23 x 35cm
